Does this flush 2 errors for EF exceptions now? From a failure mode analysis PoV, I want exceptions like this to emit only 1 error, with the most actionable message possible.

Trevor Camahan

changed to output both main and inner exception in

Does this flush 2 errors for EF exceptions now? From a failure mode analysis PoV, I want exceptions like this to emit only 1 error, with the most actionable message possible.

Trevor Carnahan

changed to output both main and inner exception in one call to `TraceError` if there is an inner exception (which is often most actionable in my experience).
